EDUCATION

B.Tech. in Computer Science & Engineering - UIET Kurukshetra - Jul 2019 - 7.48 CGPA
10+2 in Physics, Chemistry, and Mathematics - CBSE New Delhi - 85%

EXPERIENCE

Carriyo - Senior Software Engineer - Dubai (Remote)

July 2022 - Present

- **Tech Stack:** Java, AWS(Lambda, DynamoDB, SQS, S3, ECS, EventBridge, etc), Elastic Search, AWS CDK.
- **Common Libraries:**
 - Log Masking - Any service can use this framework to mask sensitive data in its API logs.
 - WebCaller - Common code for making HTTP calls. The idea was to plug in different interceptors for logging, masking, error handling, authentication, etc.
 - SQS Retrier: I created a framework where any service can retry its SQS messages with an exponential delay. Used DynamoDB to save the retry information and a retry queue to hold the messages.
- **AI Agent:**
 - Built an AI Agent using LangChain4j, Vector DB(Qdrant), LLM Models: OpenAI
- **Projects:**
 - Built multiple projects: **Click'N'Ship, PreBooked Shipments, Order APIs**. Took ownership from grooming the requirements to designing the solution to writing the code by following SOLID principles, design patterns, and best practices.
- **Carrier Connectors:** Integrated 10+ new carriers by creating their connectors and deploying them on AWS Lambda.

ThoughtWorks - Software Developer - Consultant - India

Aug 2021 - July 2022

- **Tech Stack:** Kotlin, Kafka, MongoDB, React
- I worked there on the Axis Bank project.
 - Created APIs for vendors like Google Pay and CRED.
 - Worked on making the lending journey digital. Worked on EKYC and Video-KYC.

JP Morgan - Software Engineer - India

Jul 2019 - July 2021

- **Tech Stack:** C#, .Net Core, ELK Stack, Docker
- Implemented services using AWS Lambda and SQS.
- Developed APIs with proper documentation, best design patterns, configurations, logging, etc
- Worked on reducing the API serving time by making calls asynchronous, minimizing deserialization cost, etc.
- Worked on managing client-specific behavior using configurations.
- Worked on the onboarding of a new Hotel Supplier.
- Enhanced existing system logging resulted in better Grafana dashboards, filtering logs in Kibana, and removal of false Twilio calls.
- Written a tool for production monitoring and showing the same on Grafana

WORK ETHICS

- As a software engineer, I have demonstrated my leadership skills by taking responsibility for numerous tasks, often defining their scope and designing solutions myself. I have gone beyond simply coding to make decisions that improve overall efficiency, such as refactoring and identifying existing inefficiencies in the code. I have a track record of completing projects and getting things done, and I am always looking for ways to take on more responsibility and contribute to my team's success.

- Committed to writing unit tests and diligently maintaining clear documentation.
