Education

Chitkara University

Bachelor of Engineering in Computer Science — **CGPA: 8.1**

Rajpura, Punjab, India

2022 – Present

Experience

Software Engineering Intern – *ChicMic Studios – Mohali, Punjab, India*

Nov 2025 – Present

Tech Stack: Python, FastAPI, PostgreSQL, SQLAlchemy, JWT, WebSocket, Postman, Git/GitHub

- Developed RESTful backend APIs using FastAPI for application services
- Implemented JWT-based authentication and authorization for secure API access
- Designed PostgreSQL database models using SQLAlchemy and handled schema migrations
- Optimized database queries to improve API performance and reduce response time
- Built middleware for request handling and implemented WebSocket connections for real-time communication

Projects

Employee Management System (ERP Backend)

[GitHub](#)

- Built a professional FastAPI backend with layered architecture (Routes → Services → Database → Models → Schemas)
- Implemented JWT authentication and role-based access control for Admin and Employee modules
- Developed CRUD APIs for Employees, Departments, and Leave with SQLAlchemy ORM and Pydantic validation
- Optimized database queries and integrated real-time updates via WebSocket for notifications

AI-Powered Resume Analyzer

[GitHub](#)

- Designed a stateless FastAPI backend for hybrid resume analysis (Resume Parsing → ATS Scoring → AI Semantic Analysis)
- Implemented deterministic ATS scoring and AI semantic evaluation to provide role-fit scores and skill gap insights
- Developed role-based quizzes, job link recommendations, and real-time resume evaluation without persistent storage
- Structured the system with modular layers: Routers → Services → Parsers → Scoring Engines for maintainable and scalable architecture

CPU Scheduling Simulator

- Simulated 5 CPU scheduling algorithms: FCFS, SJF, SRTF, Round Robin, and Priority
- Applied priority queues and custom comparators to optimize turnaround and waiting time
- Reduced computation time by 30% compared to naïve implementations

Technical Skills

Languages: C++, Python, SQL (PostgreSQL)

Backend: FastAPI, REST APIs

Core Concepts: Data Structures and Algorithms, Object Oriented Programming, DBMS, Operating Systems

Tools: Git, GitHub, Postman

Libraries: SQLAlchemy, Uvicorn, Pydantic
