Profile

Aspiring Software Engineer skilled in **Core Java**, **Spring Boot**, **DSA**, and building **RESTful APIs**. Strong foundation in OOP, DBMS, Software Lifecycle, **seeking an internship** to apply and enhance my technical expertise in **real-world projects**.

Education

Chitkara University
B.E. in Computer Science Engineering
◦ CGPA: 7.8 (Till 5th Semester)

Rajpura, Punjab
2022 – 2026

AVM Public School
12th

Hodal, Haryana
2022

Technical Skills

Languages: Java, C++, JavaScript

Frameworks & Tools: Spring Boot, REST API, Git/GitHub, Postman, VS Code

Databases: PostgreSQL, DynamoDB (basic)

Core CS Concepts: Data Structures and Algorithms, OOP'S, DBMS, Operating Systems

Projects

Go Food – Food Ordering API

[GitHub](#) 

- Created a **Spring Boot** project in Java, which is exposing some **APIs** for **Hotel Owners** and **End Customers**.
- Created **CRUD endpoints** for Admins to manage their Food Items.
- Created an `/order` endpoint, to place a customer order.
- Used NoSQL Database (**AWS DynamoDB**), to store Food Items.
- Followed **3 Layer architecture**, best practices, OOPs concepts for readability and maintainability.

Employee Management CRUD API

[GitHub](#) 

- Created a **Spring Boot** Project in Java, which is performing **CRUD operations** in Employee Entity.
- I followed **3 Layer Architecture (Host, Service, Database)**.
- Used **postman** to test these RESTful endpoints.

CPU Scheduling Simulator

[GitHub](#) 

- Simulated 5 scheduling algorithms: FCFS, SJF, SRTF, Round Robin, and Priority.
- Applied **priority queues** and **custom comparators** to optimize turnaround and waiting time.
- Reduced computation time by **30%** over naïve methods.

Achievement

- Solved 350+ Data Structures & Algorithms problems on [LeetCode](#) 
- Built scalable REST APIs using Spring Boot and followed clean architecture principles.
- Achieved a LeetCode rating of 1400.
